github.com/0vertrained · 0vertrained.github.io

Software engineer combining enterprise API development with healthcare informatics experience. Builds applications and AI workflows with Java, Python and TypeScript, and turns operational requirements into tested software with clear documentation.

EXPERIENCE

JPMorgan Chase — Plano, Texas

Software Engineer II · Jan 2024 – Oct 2026

- Helped launch a customer-facing banking application that reduced the average account-opening time from more than an hour to about 15 minutes.
- Built internal services and interfaces that streamlined developer onboarding; partnered with product management on feature planning and roadmap decisions.
- Served as interim lead for eight engineers: code review, mentoring, sprint ceremonies.

Software Engineer I · Oct 2022 – Jan 2024

- Built Java Spring Boot microservices and integrated enterprise APIs; led the design, testing and deployment of a React/TypeScript interface with Redux.

Presbyterian Healthcare Services — Albuquerque, New Mexico

Business Informatics III · Oct 2016 – Jul 2021

- Gathered referral-workflow requirements and coordinated enhancements with Epic analysts; trained 600+ staff across 100+ departments on Epic workflows.
- Contributed to user acceptance testing for Epic upgrades, documenting defects and supporting issue resolution.

SELECTED PROJECTS

Caduceus — caduceusdemo.netlify.app

- Prior-authorization agent for a simulated health system (Python/FastAPI, React/TypeScript): document intake, FHIR evidence review against payer policy, human-approved submissions, role-checked MCP tools, a hash-chained audit log; 200+ tests, an accessibility-checked end-to-end walk, keyless Cloud Run deployment.

Lattice — lattice-robotics.netlify.app

- Robot-fleet control plane (Rust, React, ROS 2, MuJoCo) that keeps a mission's objective when the route or body changes: signed commands, reviewed detours and handoffs, recorded evidence, measured in simulation.

0VERTRAINED — 0vertrained.com

- Training ledger for hybrid athletes (React, Netlify Functions, Supabase/PostgreSQL), sole developer: per-metric wearable arbitration, a daily readiness verdict, and a server-routed LLM coach with timeouts, fallbacks and usage logging.

SKILLS

Engineering	Java, Spring Boot, Python, FastAPI, JavaScript, TypeScript, React, Rust
Data and integration	PostgreSQL, SQL, REST APIs, FHIR, MCP, Supabase, Docker
Quality and delivery	Git, CI/CD, pytest, JUnit, Jest, Vitest, Playwright, Cloud Run, Netlify
AI development	LLM APIs, model routing, evaluation harnesses, agent tooling

EDUCATION

App Academy — Jun 2022

Full Stack Software Engineering Program, 1,000 hours
